2.4 Estimación y proyección de la migración interna a nivel de departamentos.	58
3. Resultado de las estimaciones y proyecciones a nivel de departamentos. Revisión 2014.	59

## **PRESENTACIÓN**

La Dirección General de Estadística y Censos DIGESTYC ha reunido nuevos e importantes antecedentes que permiten revisar las estimaciones y proyecciones de población realizadas en 2008. El Salvador es un país que presenta una dinámica demográfica muy marcada por los movimientos migratorios, las condiciones de crisis económica que afectaron a los países de Europa y Estados Unidos (principales destinos de los emigrantes salvadoreños) posterior al 2008 pudieran tener un impacto en los movimientos migratorios desde y hacia El Salvador. Además de la situación mundial, pasados 6 años desde la última revisión de las cifras de población, es oportuno revisar las hipótesis de evolución futura de los componentes demográficos, a la luz de los nuevos antecedentes recopilados.

La preparación de esta revisión de estimaciones y proyecciones de población para el período 2005 – 2050, a nivel nacional, fue posible mediante el uso del registro de nacimientos y defunciones del sistema de estadísticas vitales; censo de los Estados Unidos.

En la publicación se presentan los antecedentes sobre la dinámica de la población del país y departamentos, y las perspectivas de evolución hasta el año 2050 y 2025 respectivamente. De esta manera se pondrá a disposición del país, y de los organismos internacionales, las estimaciones y proyecciones de población revisadas en base a los nuevos antecedentes.

En esta ocasión se elaboró las estimaciones y proyecciones de población a nivel nacional y departamental utilizando el método de los componentes por edades simples y años calendario, obteniendo así, mayor consistencia en la información generada.

## **PARTE A. ESTIMACIONES Y PROYECCIONES DE LA POBLACIÓN A NIVEL NACIONAL. 2005- 2050**

### **INTRODUCCIÓN**

La dinámica poblacional depende de múltiples factores que determinan sus características de crecimiento. Está establecida, por factores asociados a las condiciones particulares de reproducción biológica, la mortalidad y la movilidad territorial factores determinantes fundamentales del crecimiento poblacional, así como su distribución por sexo y edad.

Una vez disponibles los datos del VI Censo de Población y V de Vivienda de El Salvador realizado en 2007, se dio inició al proceso de análisis de los datos para evaluación de los resultados y para establecer las características de la evolución demográfica a lo largo de los últimos 50 años del siglo XX de donde se derivan los insumos fundamentales para la actualización de las proyecciones de población vigentes, considerando que las que se venían utilizando, en base al censo de 1992, sobreestimaban el volumen de población residente en el país<sup>1</sup>.

En el documento se desarrollan y presentan los aspectos metodológicos básicos utilizados para el análisis de la dinámica demográfica del país y se entregan las estimaciones y proyecciones de población para el período 2005 – 2050. Esta revisión, fue elaborada conjuntamente entre la Dirección General de Estadística y Censos (DIGESTYC) y el Centro Latinoamericano y Caribeño de Demografía, CELADE – División de Población de la CEPAL, con apoyo del Fondo de Población de las Naciones Unidas (UNFPA).

Estas nuevas cifras revisadas por sexo y edades simples, son fundamentales para la determinación de los cambios en las demandas sociales y la elaboración de planes y programas en diversos campos del desarrollo y tienen por objetivo principal ajustar las cifras obtenidas en 2008.

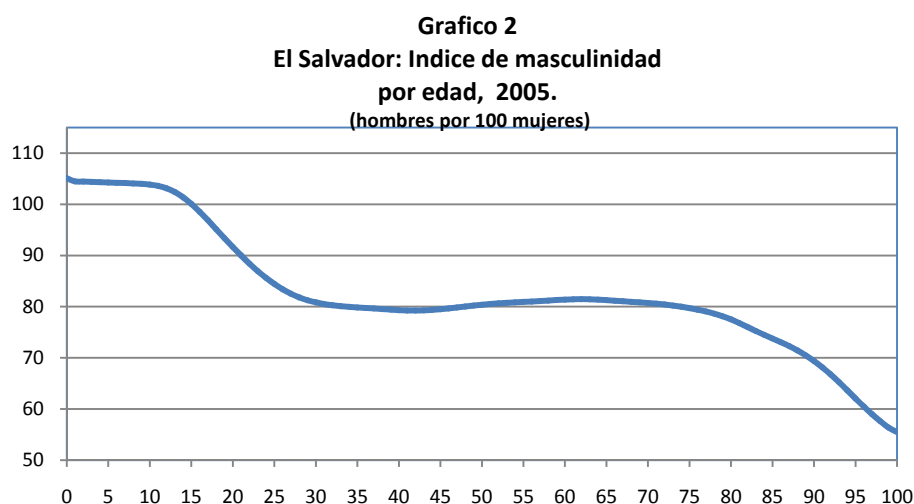

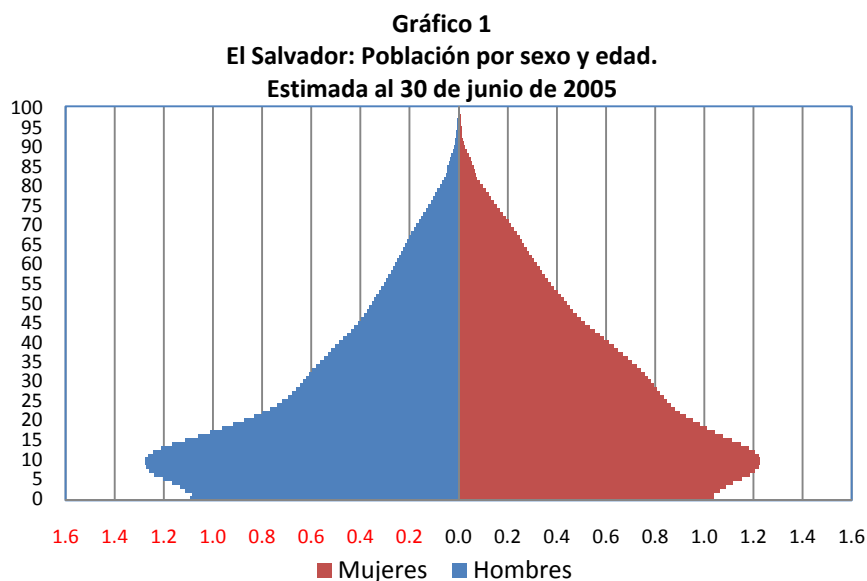

---

## 1. Población base

Como población base se utilizó la estimada para 2005 por grupos quinquenales en la proyección del 2008 y se procedió a abrir la población utilizando los multiplicadores de Sprague<sup>2</sup>, para obtener la población por edades simples. Posteriormente se realizaron ajustes para obtener una distribución suavizada de la población por edad y sexo. Los ajustes realizados corresponden a la aplicación de promedios móviles de la población femenina por edades simples y se obtuvo la masculina utilizando los índices de masculinidad por edades simples suavizados del censo de 2007. (Gráficos 1 y 2).

<sup>2</sup> Shryock, Henry S.; Siegel, Jacob S. And Associates. Studies in Population. The methods and material of demography. Academic Press. New York, 1976

De este proceso se obtuvo una población estimada 6,049,408 personas con un índice de masculinidad total de 90.6 hombres por cada 100 mujeres, y una nueva estimación de la omisión censal para el censo de 2007 la cual se presenta en el cuadro 1.

**Cuadro 1**

**El Salvador: Estimación de omisión censal resultante del nuevo proceso de conciliación demográfica (en porcentajes)**

Total	Hombres	Mujeres
5.7	5.8	5.7

## **2. Análisis de la dinámica demográfica a nivel nacional.**

### **2.1 Revisión de la estimación y proyección de la mortalidad a nivel nacional.**

Con la disponibilidad de estadísticas vitales hasta el 2008, procesadas por edades simples se procedió a la elaboración de tablas completas de mortalidad, utilizando como datos básicos, la población por sexo y edad del censo de 2007 trasladado al 30 de junio y el promedio de defunciones del 2006 al 2008, por sexo y edad simple.

Se mantuvieron las tasas de mortalidad infantil estimadas por sexo en la revisión 2008 (gráfico 3). Para la mortalidad de mayores de 10 años se suavizaron las tasas observadas y se corrigieron utilizando el método de la ecuación de equilibrio de Brass<sup>3</sup>. Las tasas de mortalidad de la población entre 1 y 10 años se obtuvieron por interpolación de las tablas de Coale y Demeny<sup>4</sup>, modelo oeste correspondiente a la mortalidad infantil estimada (Cuadro 2, Gráficos 3a, 3b, 4a y 4b).

<sup>3</sup> Naciones Unidas, 1986. Manual X. Técnicas indirectas de estimaciones demográficas.

**5a Hombres**

**5b Mujeres**

Se proyectaron las esperanzas de vida al nacer<sup>5</sup> por sexo como medida del nivel de mortalidad las cuales fueron proyectadas utilizando una curva logística según los criterios establecidos en la proyección a largo plazo del CELADE<sup>6</sup> (Cuadro 3).

Cuadro 3  
El Salvador: Asíntotas y pivotes de las logísticas utilizadas en la proyección de la esperanza de vida al nacer por sexo.

Sexo	Asíntotas		Pivotes			
	Inferior	Superior	Año	Valor	Año	Valor
Hombres	30	90	2008	66.4	2048	73.6
Mujeres	30	93	2008	75.9	2048	82.2

Para obtener las tablas de mortalidad proyectadas para el período 2005-2050 se utilizó el módulo de Mortalidad del Programa de Proyecciones Demográficas en planillas Excel (PRODEX)<sup>7</sup>, adoptando como tabla inicial una tabla con la misma estructura que la estimada para 2006-2008 pero con una mortalidad mayor y como tabla límite las tablas modelo de Coale y Demeny modelos oeste con esperanza de vida de 90 años para hombres y 93 para mujeres<sup>8</sup> y las esperanzas de vida resultantes de la proyección logística.

## 2.2 Revisión de la estimación y proyección de la fecundidad a nivel nacional.

Se partió de los niveles de fecundidad estimados durante el proceso de conciliación demográfica, realizado en 2008, medidos por la tasa global de

<sup>5</sup> Representa la duración media de la vida de los individuos, que integran una cohorte hipotética de nacimientos, sometidos en todas las edades a los riesgos de mortalidad del período en estudio.

<sup>6</sup> Centro Latinoamericano y Caribeño de población (CELADE) – División de Población de la CEPAL. Observatorio Demográfico No. 11. Proyecciones de población a largo plazo. Abril de 2011

Programas informáticos para proyecciones demográficas: revisión y comparación comentada. Serie e-Investigaciones No. 2. RED ALAP/CELADE de estimaciones y proyecciones de población. Estimaciones y proyecciones de población en América Latina. Desafíos de una agenda pendiente.

<sup>8</sup> <http://esa.un.org/wpp/Model-Life-Tables/download-page.html>

fecundidad<sup>9</sup>, posteriormente se proyectaron utilizando una curva logística según los criterios establecidos en la proyección a largo plazo del CELADE<sup>10</sup> (Gráfico 6).

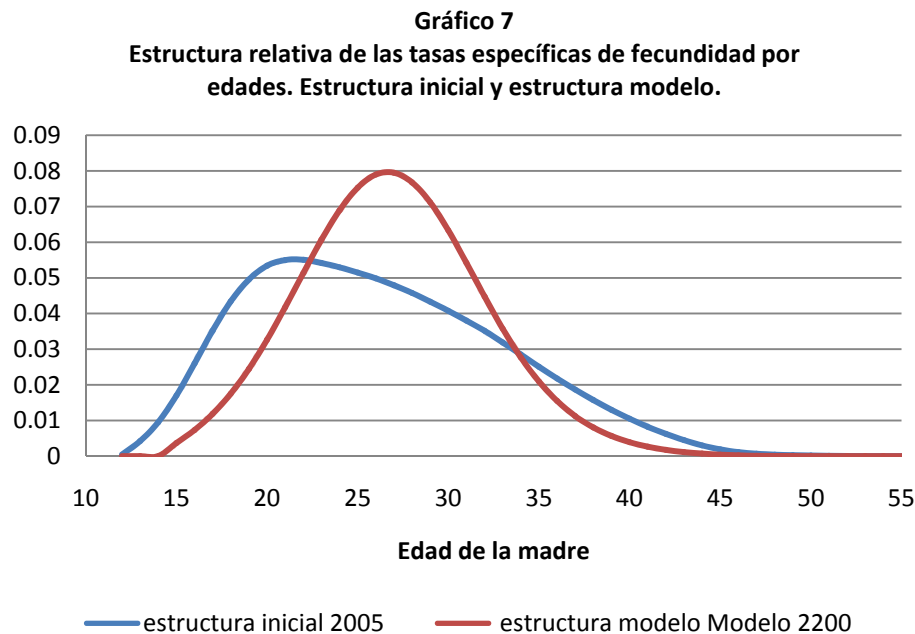

Para estimar la fecundidad por edades simples se utilizó la estructura de tasas específicas de fecundidad por edades simples de las madres resultantes del promedio de nacidos vivos entre los años 2006-2008 y la población femenina de 12 a 55 años censada en 2007 y trasladada al 30 de junio.

<sup>9</sup> Es el número promedio de hijos que tendría una mujer de una cohorte hipotética de mujeres que durante su vida fértil tuvieran sus hijos de acuerdo con las tasas de fecundidad por edad del periodo de estudio y no estuvieran sometidas a riesgos de mortalidad desde el nacimiento hasta la finalización del periodo fértil.

<sup>10</sup> CELADE (2011)

En esta oportunidad se optó por trabajar con tasas más allá del grupo de mujeres considerada fértil (15 a 49 años) con el objeto de visualizar en el período de estimación los nacimientos de mujeres muy jóvenes que se observan en las estadísticas vitales.<sup>11</sup>(Gráfico 7)

La estructura elegida como modelo se caracteriza por presentar una fecundidad tardía y se proyectan las tasas específicas de fecundidad en base a los niveles de fecundidad anteriormente estimados y proyectados (tasa global de fecundidad). Como hipótesis de proyección se espera que la estructura modelo se alcance en el año 2200, este horizonte lejano implica un cambio lento entre la estructura inicial, estimada para 2005 hacia el modelo.

En el proceso de ajuste de la dinámica poblacional fue necesario ajustar los niveles de fecundidad anteriormente estimados y proyectados los cuales se presentan en el siguiente cuadro.

<sup>11</sup> DIGESTYC, base de datos de estadísticas vitales.

**Cuadro 3**  
**El Salvador: Tasas globales de fecundidad estimada y proyectada.**  
**2005-2050**

<b>Período</b>	<b>Tasa Global de Fecundidad</b>	<b>Período</b>	<b>Tasa Global de Fecundidad</b>	<b>Período</b>	<b>Tasa Global de Fecundidad</b>
2005-2006	2.39	2021-2022	1.72	2037-2038	1.77
2006-2007	2.32	2022-2023	1.70	2038-2039	1.77
2007-2008	2.25	2023-2024	1.70	2039-2040	1.78
2008-2009	2.19	2024-2025	1.71	2040-2041	1.78
2009-2010	2.14	2025-2026	1.71	2041-2042	1.78
2010-2011	2.08	2026-2027	1.72	2042-2043	1.79
2011-2012	2.04	2027-2028	1.72	2043-2044	1.79
2012-2013	1.99	2028-2029	1.73	2044-2045	1.80
2013-2014	1.95	2029-2030	1.73	2045-2046	1.80
2014-2015	1.91	2030-2031	1.74	2046-2047	1.81
2015-2016	1.87	2031-2032	1.74	2047-2048	1.81
2016-2017	1.84	2032-2033	1.74	2048-2049	1.81
2017-2018	1.81	2033-2034	1.75	2049-2050	1.82
2018-2019	1.79	2034-2035	1.75		
2019-2020	1.76	2035-2036	1.76		
2020-2021	1.74	2036-2037	1.76		

La hipótesis de evolución futura de la fecundidad supone un descenso según un comportamiento logístico y, una vez alcanzado el valor de 1,7 hijos por mujer, cambiaría su comportamiento hacia la alza de las tasas sin alcanzar el valor de reemplazo.

### **2.3 Revisión de la estimación y proyección de los saldos migratorios internacionales a nivel nacional.**

Los saldos migratorios fueron estimados considerando el nuevo censo de población de los Estados Unidos, que publicó la población de origen salvadoreña y que ha presentado un aumento considerable respecto a los censados en 2000. La población de origen salvadoreña considera los inmigrantes salvadoreños y los hijos de salvadoreños nacidos en los Estados Unidos, por tanto no constituyen en una cifra de emigrantes desde El Salvador. Sin embargo como la cifra ha aumentado de manera importante se consideró que la crisis de los Estados Unidos no tuvo un gran impacto en los movimientos migratorios desde El Salvador a los Estados Unidos.

También se ha revisado la información disponible en IMILA y el estudio de salvadoreños en el exterior<sup>12</sup>. La población nacida en El Salvador y censada en Estados Unidos en 2000 y la que identificó la encuesta *Current Population Survey de 2010* aumentó de 787.711 a 1.146.688 (Cuadro 4), siendo este país el principal destino de los migrantes salvadoreños. Este comportamiento es distinto a lo que se observó con migrantes de países como México a Estados Unidos por lo tanto este hecho estaría confirmando el menor impacto de la crisis de los Estados Unidos en los movimientos migratorios desde El Salvador a los Estados Unidos.

**PARTE B. ESTIMACIONES Y PROYECCIONES DE LA POBLACIÓN A NIVEL DEPARTAMENTAL. 2005-2025**

**1. Estimación de la Población Base a Nivel de Departamento.**

Para determinar la población base por departamento se procedió de manera similar que a nivel nacional. El procedimiento que se realizó utilizando la población censada y la estimada en la revisión 2008 para el año 2005 que se desglosó por edades simples, respetando los índices de masculinidad censal. Posteriormente se cuadró la suma de la población de los departamentos a la población nacional. Un aspecto importante fue analizar las omisiones censales por sexo y departamento y realizar los ajustes necesarios. De esto resultaron nuevas estimaciones de omisiones censales por departamento las cuales se presenta a continuación:

**Cuadro 1**  
**El Salvador: omisión censal estimada por sexo según departamento. 2007**

<b>Departamento</b>	<b>Ambos sexos</b>	<b>Hombres</b>	<b>Mujeres</b>
<b>El Salvador</b>	<b>5.7</b>	<b>5.8</b>	<b>5.7</b>
Ahuachapán	2.8	2.8	2.9
Santa Ana	6.2	6.1	6.4
Sonsonate	5.5	3.9	7.0
Chalatenango	2.8	1.9	3.5
La Libertad	6.9	7.2	6.7
San Salvador	7.1	6.9	7.3
Cuscatlán	2.4	2.5	2.4
La Paz	5.0	5.8	4.1
Cabañas	4.2	4.9	3.5
San Vicente	4.8	4.7	4.9
Usulután	2.1	2.3	2.0
San Miguel	6.2	8.2	4.5
Morazán	6.8	7.3	6.4
La Unión	7.0	7.8	6.2

## 2. Análisis de la dinámica demográfica a nivel departamental

### 2.1 Estimación y proyección de la mortalidad a nivel de departamento

Para la construcción de las tablas iniciales a nivel departamental se utilizaron los datos de defunciones por sexo y edad, provenientes de las estadísticas vitales para el período 2000-2011, los cuales fueron “cuadrados” a las defunciones implícitas en las estimaciones a nivel nacional para 2006-2008.

Con la población censada a nivel departamental para 2007 se procedió a calcular las tasas específicas de mortalidad por sexo y edad, manteniendo las estimaciones de mortalidad infantil y factores de separación de las muertes de menores de 1 año, obtenidas en la revisión 2008 (cuadro 2). Procediendo de esta manera a calcular las tablas de mortalidad completas a nivel de departamentos, en el cuadro 3 se observan las esperanzas de vida resultantes de las tablas iniciales, el diferencial por sexo y la relación con la estimación nacional.

**Cuadro 2**  
**El Salvador: Tasas de mortalidad infantil estimadas por sexo y departamento.**  
**2005-2006**

Departamento	tasa de mortalidad infantil (defunciones de menores de 1 año por mil nacidos vivos)			Relación entre la tasas departamento/país	
	Ambos sexos	Hombres	Mujeres	Hombres	Mujeres
<b>El Salvador</b>	<b>21.0</b>	<b>23.0</b>	<b>18.8</b>	<b>1.00</b>	<b>1.00</b>
Ahuachapán	23.5	25.4	21.6	1.12	1.11
Santa Ana	25.5	27.9	23.0	1.22	1.21
Sonsonate	23.9	26.4	21.3	1.14	1.15
Chalatenango	22.3	25.4	19.1	1.07	1.10
La Libertad	22.9	25.9	19.7	1.09	1.13
San Salvador	16.0	18.1	13.8	0.76	0.79
Cuscatlán	22.7	24.3	21.1	1.08	1.05

Cabañas	16.9	17.4	16.5	0.81	0.75
San Vicente	26.0	26.9	25.2	1.24	1.17
Usulután	20.3	22.3	18.1	0.97	0.97
San Miguel	20.5	22.4	18.5	0.98	0.97
Morazán	27.6	29.8	25.3	1.32	1.29
La Unión	19.1	19.4	18.7	0.91	0.84

**Cuadro 3**

**El Salvador: Esperanza de vida al nacer por sexo, diferencia entre sexos y relación con la e(0) nacional, estimadas en las tablas iniciales<sup>1</sup>.**

Departamento	Esperanza de vida al nacer		Diferencia entre sexos	Relación entre las e(0) departamento y país	
	Hombres	Mujeres	e(0) Mujeres – e(0) Hombres	Hombres	Mujeres
<b>El Salvador</b>	<b>66.0</b>	<b>75.5</b>	<b>9.4</b>	<b>1.00</b>	<b>1.00</b>
Ahuachapán	66.3	74.2	7.9	1.00	0.98
Santa Ana	63.9	73.2	9.3	0.97	0.97
Sonsonate	63.2	73.7	10.5	0.96	0.98
Chalatenango	67.0	74.4	7.4	1.02	0.99
La Libertad	67.6	76.7	9.1	1.02	1.02
San Salvador	67.6	77.0	9.4	1.02	1.02
Cuscatlán	65.1	74.4	9.4	0.99	0.99
La Paz	63.8	75.0	11.1	0.97	0.99
Cabañas	65.0	75.8	10.8	0.99	1.00
San Vicente	65.4	75.3	9.9	0.99	1.00
Usulután	65.4	75.8	10.4	0.99	1.00
San Miguel	65.5	75.5	9.9	0.99	1.00
Morazán	67.6	74.5	6.9	1.02	0.99
La Unión	64.7	74.2	9.5	0.98	0.98

<sup>1</sup> Correspondientes a tablas de mortalidad con una mortalidad 5% superior a la mortalidad estimada para 2006-2008, construidas con las estadísticas vitales y la población censada

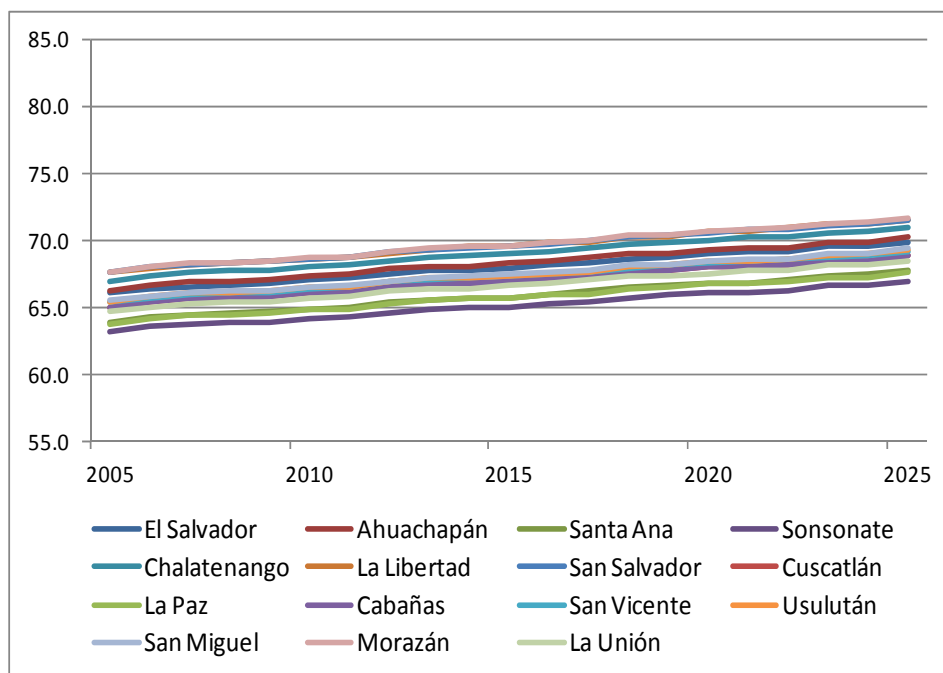

En el cuadro 3, se destaca el diferencial entre las e(0) de hombres y mujeres que en algunos departamentos es superior a los 10 años, reflejo de la alta mortalidad entre los hombres adultos jóvenes (15 a 30 años) observada a nivel nacional (Gráfico 5a y 5b de la parte A).

Por ejemplo La Paz, departamento con el mayor diferencial de e(0) entre hombres y mujeres, presenta 3.7 años de vida perdidos entre los hombres de 15 a 30 años y las mujeres solamente 1 año. Morazán, departamento con el menor diferencial entre e(0), presenta 2.3 y 0.8 años de vida perdidos para los hombres y mujeres

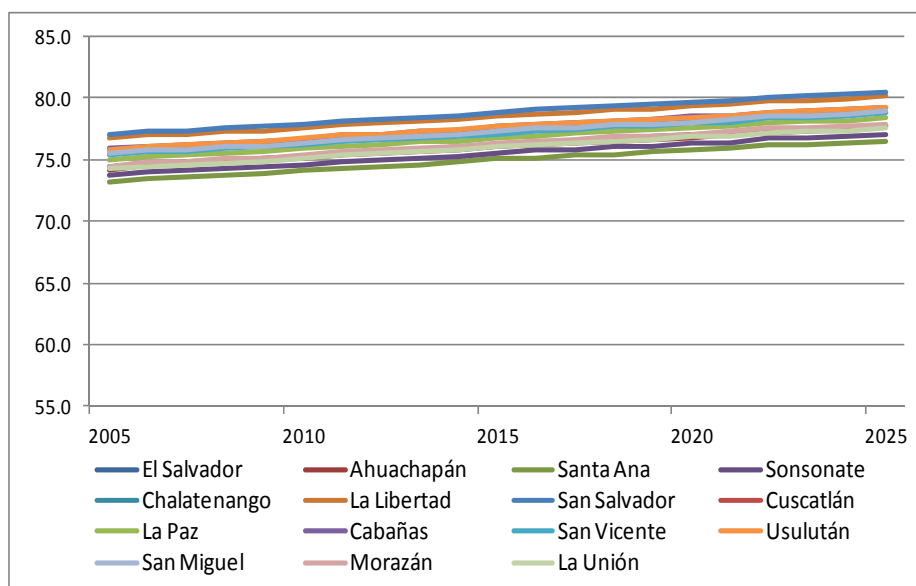

de 15 a 30 años respectivamente. Esto pone en evidencia que la mayor mortalidad masculina en edades tempranas se observa en todos los departamentos.

Para proyectar el nivel de la mortalidad por departamentos se utilizó la diferencia relativa entre las esperanzas de vida al nacer por sexo entre cada departamento y el nivel nacional, resultantes de las tablas de mortalidad completas construidas a nivel nacional y departamental en base a las defunciones de estadísticas vitales de 2000-2011, bajo el supuesto de que se mantendrán los diferenciales en el tiempo.

**Gráfico 1**  
**El Salvador: Esperanza de vida al nacer, estimados y proyectados por departamento. 2005-2025**  
**Hombres**

**Gráfico 2**  
**El Salvador: Esperanza de vida al nacer, estimados**  
**y proyectados por departamento. 2005-2025**  
**Mujeres**

Se observa en los gráficos 1 y 2, por un lado, se mantendrán con las menores esperanzas de vida al nacer Sonsonate en el caso de hombres y Santa Ana en el caso de mujeres y, por otro lado, con las mayores esperanzas de vida al nacer Morazán y San Salvador para hombres y mujeres respectivamente.

Para aplicar el método de los componentes, según el esquema propuesto por Naciones Unidas, se necesitan las relaciones de sobrevivencia por sexo y edad. Estas relaciones son obtenidas de las tablas de mortalidad implícitas en las proyecciones de población. La tabla límite utilizada en este caso corresponde a la las tablas del conjunto de tablas modelos de Coale y Demeny, con esperanza de vida al nacer de 90.0 años para hombres y 93.0 para mujeres, mismo procedimiento realizado a nivel nacional.

Para interpolar las tablas de mortalidad que sirvieron de insumos para la proyección se utilizó el módulo de mortalidad del PRODEX, que trabaja con tablas completas. Las tablas resultantes también son completas y para períodos de 1 año.

## 2.2 Estimación y proyección de la fecundidad a nivel de departamento.

Para estimar el nivel de la fecundidad por departamentos fue necesario utilizar los nacimientos promedio de las estadísticas vitales para el período 2000-2011<sup>13</sup>, población femenina de 12 a 55 años estimada al 30 de junio de 2005<sup>14</sup> (población base), con los cuales se obtuvieron las tasas específicas de fecundidad  $f(x,1)$  (Gráfico 3). Posteriormente fueron suavizadas obteniendo las estructuras y TGF correspondientes según departamentos así como la diferencia relativa de las TGF de los departamentos y la TGF a nivel nacional. (Cuadro 4 y Gráfico 4).

**Gráfico 3**

**El Salvador: Distribución relativa de las tasas específicas de fecundidad por edades estimadas según departamento. 2005-2006**

Para proyectar los niveles de fecundidad a nivel de departamentos se aplicaron los diferenciales del cuadro 4 a las TGF a nivel nacional obteniendo de esta manera

<sup>13</sup> Fue necesario utilizar una serie más amplia de nacimientos a nivel departamental porque al considerarlos por edades simples de las madres y departamento se encontraron pocas observaciones. Al utilizar la serie 2000-2011 se logró mayor coherencia y se logró suavizar las tasas específicas, lo que no se pudo hacer si se consideraba un período de 3 años como se utiliza habitualmente.

<sup>14</sup> En esta oportunidad se optó por trabajar con tasas más allá del grupo de mujeres considerada tradicionalmente fértil (15 a 49 años) con el objeto de visualizar en el período de estimación los nacimientos de mujeres muy jóvenes que se observan en las estadísticas vitales.

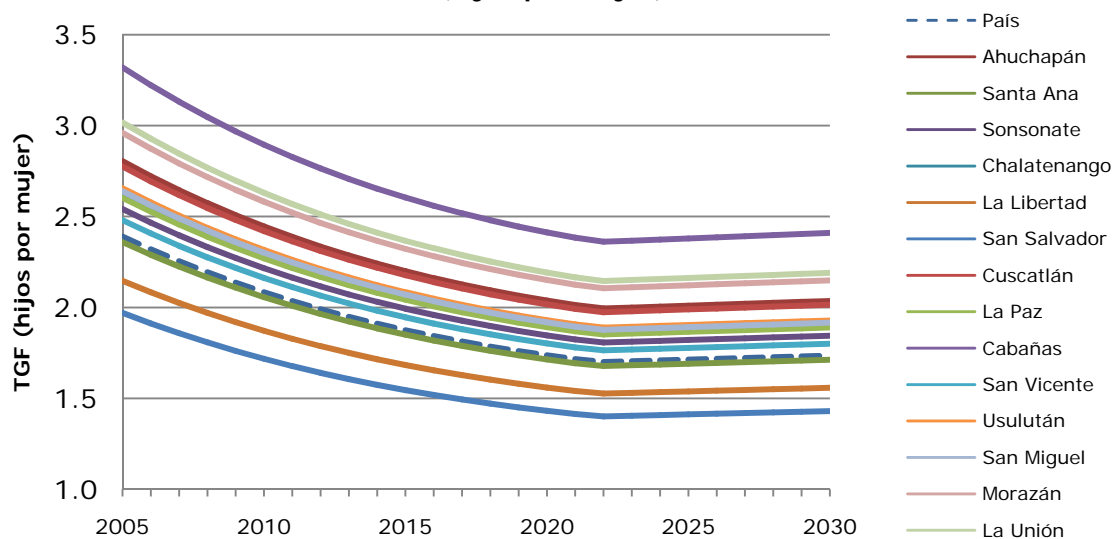

las TGF proyectadas a nivel de departamentos bajo el supuesto de que se mantendrán los diferenciales en el tiempo. (Gráfico 4)

**Cuadro 4**  
**El Salvador: Tasas globales de fecundidad estimadas y**  
**diferencias relativas al promedio nacional, según**  
**departamento. 2005**

Departamento	TGF (hijos por mujer)	Diferencia relativa en relación al promedio nacional
<b>El Salvador</b>	<b>2.31</b>	<b>1.00</b>

**proyectadas por departamento. 2005-2030**  
**(hijos por Mujer)**

### **2.3 Estimación y proyección de la migración internacional a nivel de departamentos.**

En el caso particular de El Salvador, país expulsor de población, no se cuenta con información del lugar de residencia antes de migrar. Para poder distribuir los saldos migratorios internacionales a nivel departamental se utilizó la información de población, censada en 2007, que recibe remesas según departamento de residencia y suponiendo que el saldo migratorio estimado y proyectado se distribuye de la misma manera que la población que recibe remesas del exterior.

### **2.4 Estimación y proyección de la migración interna a nivel de departamentos.**

La estimación del saldo migratorio entre departamentos fue hecha en base a la pregunta de lugar de residencia cinco años antes de la fecha censal por sexo y edad. Los saldos migratorios por edad fueron suavizados, por medio de promedios móviles y posteriormente cuadrados para que las sumas por sexo y edad resultantes fueran cero.

La proyección de los saldos migratorios por sexo se realizó bajo el supuesto de que estos saldos tendrían a cero para el año 2040 y con la misma distribución por edades que la estimada según la pregunta de lugar de residencia 5 años antes.

### 3. Resultados de las proyecciones a nivel departamental. Revisión 2014

#### 01. Ahuachapán: Población e indicadores de estructura de la población estimados y proyectados 2005-2025.

Año	Población Total	Hombres	Mujeres	Índice de Masculinidad	Relaciones de Dependencia (<15, + 65 y más)/(15-64) por cien	Índice de Envejecimiento (60 y más/<15)	Edad media de la población
